Some Important Notes

- **Not a Must Have:** You don't have to use or have all the items in this kit to work with part washer machine. With this full kit, you'll have all the tools you need to do anything a part washer machine can do. We suggest, that you start with the basics and add more tools later as you learn and work on different projects.
- **Disclaimer:** This document is for informational purposes only. The author is not liable for any errors or damages resulting from its use. Users should seek professional guidance before operating part washer machine by using this document, you agree to release the author from any liability.
- **Only a Kit:** This document lists the items needed to use the full range of what part washer machine can do. It does not cover machine operation or maintenance. Its purpose is solely to provide a list of necessary accessories.

Hand Tools

Item name	Qty	Sizes	Notes / recommended source	Picture
Mini Wire Brush Set	1	40mm/1.5" brush length	Best to have one of each, stainless steel, nylon, and brass. *Stainless is preferred because it's not rusting but if you can't find stainless you can get a steel brush and it will do job, especially because this is kind of a consumable item.	
Medium Wire Brush Set	1	100mm/4" brush length	Best to have one of each, stainless steel, nylon, and brass. *Stainless is preferred here as well.	

Big stainless steel Wire Brush	1	140mm/5" brush length	With this brush you'll do most of the heavy-duty cleaning and you probably will have it longer than the smaller brushes, so it's really preferred to have it stainless steel.	
4-piece Precision Hook and Pick Set	1	70mm/2.7" tool length, 75mm/3" handle length	*Specified sizes doesn't matter too much here. *Better to buy set that has aluminum handle because it's not rusting and won't be affected by the cleaning liquid you use in the machine.	
Stainless Steel Tube Cleaning Brush Set	1	Wire diameters: 6mm, 10mm, 15mm, 20mm, 25mm, 30mm, 40mm, 50mm / 0.25", 0.4", 0.6", 0.8", 1", 1.2", 1.6", 2"	*Stainless is preferred because it's not rusting but if you can't find stainless you can get a steel brush and it will do job, especially because this is kind of a consumable item. *Better buy brushes that have straight handle without any loop in the end so you could also hold and use them with a drill/driver as sometimes it would be helpful to use not just by hand But if you don't find them, you can just cut the loop off.	
Flow-Thru Parts Washer Brush	1	Approximately 255mm/10" total brush length.	*Many parts washer machines come standard only with a faucet and without the Flow-Thru Brush. If you have one like this or if you buy one like this, it's very helpful to purchase a Flow-Thru Brush separately. *Make sure you buy one with a tube attached to it and not just the brush.	

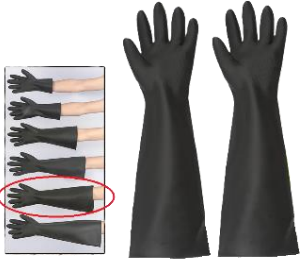

Stainless Steel Hard-Bristled Crevice Cleaning Brush	1	Approximately 125mm/5" brush length	*Stainless is preferred here as well. *If you can find, better to buy one with aluminum handle because it's not rusting and won't be affected by the cleaning liquid you use in the machine.	
Brass Hard-Bristled Crevice Cleaning Brush	1	Approximately 125mm/5" brush length	*If you can find, better to buy one with aluminum handle because it's not rusting and won't be affected by the cleaning liquid you use in the machine.	

Bits For Dremel or Drill/Driver

Item name	Qty	Sizes	Notes / recommended source	Picture
Pen Shape Stainless Steel Wire Brushes for Dremel Rotary Tools	10	50mm/2" total length, and approximately 10mm/0.4" brush length	*Best to buy 10-15 units in advance. *Stainless is preferred because it's not rusting but if you can't find stainless you can get a steel brush and it will do job, especially because this is kind of a consumable item.	
Pen Shape Brass Wire Brushes for Dremel Rotary Tools	10	50mm/2" total length, and approximately 10mm/0.4" brush length	*Best to buy 10-15 units in advance.	
Cup Shape Stainless Steel Wire Brushes for Dremel Rotary Tools	10	50mm/2" total length, and approximately 13mm/0.5" brush diameter	*Best to buy 10-15 units in advance. *Stainless is preferred because it's not rusting but if you can't find stainless you can get a steel brush and it will do job, especially because this is kind of a consumable item.	

Cup Shape Brass Wire Brushes for Dremel Rotary Tools	10	50mm/2" total length, and approximately 13mm/0.5" brush diameter	*Best to buy 10-15 units in advance.

Safety Equipment

Item name	Qty	Sizes	Notes / recommended source	Picture
Heavy Duty Chemical Resistant Gloves	1	500mm/20" total glove length.	<p>*It's best to get heavy-duty gloves, especially if you are handling steel parts, which often have sharp corners or edges, lighter gloves tend to tear easily from them.</p> <p>* It's also recommended to get gloves that are at least 500mm/20" long and cover almost up to your elbows. If you use shorter gloves, you'll find that liquid gets into them more often.</p>	
Glove Clip/Holder	1	N/A	<p>*Generally, we always recommend storing equipment in hermetically sealed storage places like cabinets and drawers. However, gloves that are used in a parts washer need to be hung to dry, and this glove clip/holder is super effective for that purpose</p> <p>* Another tip is to always hang your gloves upside down from the fingers so that any humidity in them can dry off.</p>
